Make a Deposit

Making a deposit is super simple... All you need to do is to just continue deposing untill required amount for withdrawal is due. Choose a plan and earn more.

EVOLUTION OF CRYPTO CURRENCY

Crypto Currency

A crypto-currency, or crypto is a digital asset designed to work as a medium of exchange wherein individual coin ownership records are stored in a ledger existing in a form of a computerized database using strong cryptography to secure transaction records, to control the creation of additional coins, and to verify the transfer of coin ownership. Cryptocurrency does not exist in physical form (like paper money) and is typically not issued by a central authority. Cryptocurrencies typically use decentralized control as opposed to a central bank digital currency (CBDC). database When a cryptocurrency is minted or created prior to issuance or issued by a single issuer, it is generally considered centralized. When implemented with decentralized control, each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.

Vision & Mission

Mission

"To deliver a proactive planned approach to help our clients achieve their financial goals through integrity, passion and relentless commitment to goal attainment." An appropriate investment goal should be measureable and attainable.

Vision

To be a successful investment firm through the application of the highest professional standards, drawing on our investment experience and adhering to our values

What Is Blockchain

Blockchain is a system of recording information in a way that make difficult or impossible to change, hack, or cheat the system. A blockchain is essentially a digital ledger of transactions that is duplicated and distributed across the entire network of computer systems on the blockchain. Each block in the chain contains a number of transactions, and every time a new transaction occurs on the blockchain, a record of that transaction is added to every participant's ledger. The decentralized database managed by multiple participants is known as Distributed Ledger Technology. Blockchain is a type of DLT in which transactions are recorded with an immutable cryptographic signature.

What Is Crypto Currency

A cryptocurrency is an encrypted data string that denotes a unit of currency. It is monitored and organized by a peer-to-peer network called a blockchain, which also serves as a secure ledger of transactions, e.g., buying, selling, and transferring.

What is decentralization?

In blockchain, decentralization refers to the transfer of control and decision-making from a centralized entity (individual, organization, or group thereof) to a distributed network. Decentralized networks strive to reduce the level of trust that participants must place in one another, and deter their ability to exert authority or control over one another in ways that degrade the functionality of the network.

DECENTRALIZED

Bitcoin mining and Trading Economic Assets

STELLAR SYNC GROUP
strategic trading

To put it simply, trading is the buying and selling of financial assets. However, actually trading yourself isn't quite as straightforward.

There's a lot to learn and we want to make things as simple as possible for you. That's why we've created guides covering the most important things to know as a new trader. Don't worry, you'll find no overcomplicated jargon here. Just easy-to-understand explanations you'll get your head around in no time.

Basics of Bitcoin Mining

There are three ways to acquire Bitcoin:

Purchase them on an exchange

Receive them in exchange for goods and services

Mine new Bitcoin

The process of discovering new Bitcoin is described as mining because it resembles the process of mining for any other resource. With gold mining, miners search and dig through the earth in hopes of striking gold.
